SUMMARY

I am a Software Engineering graduate who genuinely enjoys building things from start to finish, whether that means writing a Python or Node.js backend, putting together a polished Next.js frontend, or building a mobile app in Flutter. I like owning a project end to end, from designing the database to wiring up real integrations like SMTP email and third-party APIs. I read the documentation before asking for help, and I care more about shipping something that actually works than something that just looks finished.

EXPERIENCE

Digisol 365, *App Developer* Sep 2024 to Oct 2025, Bahawalpur, Pakistan

- Designed and built front end UI screens for client applications, keeping the layouts clean and easy to use.
- Worked on the backend with Firebase, setting up and checking data flow so features worked correctly from end to end.
- Tested completed features before release, checking both UI and backend behavior to catch issues early.
- Handled day to day IT support, system maintenance, troubleshooting, and network issues alongside development work.
- Coordinated with the team on project timelines and worked directly with clients, which taught me how to manage expectations and scope.

PROJECTS

SILI AI Assistant Platform *(Full Stack, AI Integration)* Jun 2026 to Jul 2026

- Built a self hosted AI assistant with a custom terminal style frontend, connected to a modular backend so the underlying AI model can be swapped without touching the rest of the app.
- Connected multiple third party APIs (Anthropic Claude, Groq, Serper, and NVD) through a clean backend layer that handles live web search and structured data responses.

Crime Investigation Management System *(Full Stack, AI Integration)* May 2026 to Jun 2026

- Built a backend REST API using FastAPI and PostgreSQL to manage detectives, cases, suspects, evidence, and witness statements.
- Added an AI layer that looks at the full case evidence, statements, and crime details together, and figures out which charges could apply based on what it finds.
- Had the AI pull in supporting context through research instead of just giving a static answer, on top of solid database design, validation rules, case threat levels, and an AI generated risk score.

AI File Assistant *(Full Stack, AI Integration)* 2026

- Built a cross platform Flutter app with a FastAPI backend that lets users analyze datasets and ask questions about them in plain language, using Google Gemini AI.
- Added automated dataset health checks (missing values, duplicate rows) and a safe editing flow where Gemini suggests cell level changes that the user reviews and approves before anything is saved.
- Stored dataset details using SQLite and SQLAlchemy so users can come back and keep editing a file without uploading it again.

Personal Portfolio Website *(Full Stack)* 2026

- Built and deployed a portfolio using Next.js 16, Tailwind CSS, Framer Motion, GSAP, and Three.js, including animated 3D elements that respect reduced motion settings.
- Built a working contact form using a Next.js API route with Nodemailer and SMTP, instead of a plain mailto link.
- Added dark and light theming, a full screen animated mobile menu, a scroll progress indicator, and role specific resume downloads.

Password Toolkit *(Python, Security Utility)* 2026

- Built a Python based password security toolkit with a password strength checker, a generator, an encrypted vault, and an app lock feature.

Flappy Bird Game *(Python, Game Development)* 2026

- Built a Flappy Bird clone in Python with Pygame, including responsive controls, randomly generated obstacles, and real time score tracking.

TECHNICAL SKILLS

Languages: Python, JavaScript, SQL, C#, C++, HTML, CSS

Frontend: React, Next.js, Tailwind CSS, Framer Motion, Three.js, GSAP, responsive UI design

Backend and APIs: FastAPI, Node.js, REST APIs, SQLAlchemy ORM

Mobile: Flutter, widget development, responsive UI design

Databases: PostgreSQL, MySQL, MongoDB, SQLite, Firebase

Python Ecosystem: NumPy, Pandas, Jupyter Notebook, Pygame

Tools: Git, VS Code, PyCharm, Android Studio, Visual Studio, XAMPP, Anaconda Navigator

EDUCATION

BS Software Engineering, Islamia University Bahawalpur Sep 2020 to May 2024
Advanced Python Bootcamp, Excellence Delivered, Lahore Mar 2025 to Jun 2025
Web Development Bootcamp, BuiltinSoft, Bahawalpur Jul 2025 to Dec 2025

SOFT SKILLS

Problem Solving, Critical Thinking, Communication, Technical Documentation, Time Management, Team Collaboration, Quick Learner, Adaptability
